

MILI
QUEBEC AGENTIQUE INC.

PRODUCT BROCHURE

Mili

Your private AI agent platform

Automation, integrations, and intelligence — private by design, on infrastructure you control.

WHAT IT IS

The assistant that actually does the work.

Mili is a private AI agent that runs in your own environment and gets real work done — connecting your tools, running tasks on a schedule, and answering from your own information. It installs in minutes, keeps every credential encrypted on your hardware, and sends nothing to a shared cloud. The model's reasoning runs on a dedicated, sovereign GPU endpoint — your data is processed there, never stored.

Most AI tools stop at the chat box. Mili goes further: it is an agent that takes action. Your data, files, and credentials stay on hardware you own — there is no shared cloud tenancy and no third-party SaaS sitting between you and your information. The one thing that leaves your environment is inference: prompts travel over an encrypted channel to a single-tenant GPU endpoint in a Canadian ISO 27001 datacenter, get processed, and come back. You own the box, you own the data, and you decide — tool by tool — exactly what Mili is allowed to reach.

WHAT IT DOES FOR YOU

One platform, everything it can do for you.

- **Takes action, not just chat.** It carries out multi-step tasks end to end, then reports back with what it did.
- **Remembers what matters.** Tell it to keep something in mind and it will — building lasting context about your work.
- **Works on a schedule.** Set jobs to run hourly, daily, or on your own cadence, with no one watching.
- **Answers from your own information.** Point it at your documents and it responds with grounded, source-aware answers.
- **Coordinates as a team.** Multiple agents can hand work to one another to cover larger jobs.
- **Stays in its lane.** You grant access tool by tool, so it only ever touches what you allow.

INTEGRATIONS

Connects to the tools you already use.

Mili reaches into the systems your team works in every day, with hundreds of ready-to-use integrations across the areas that matter most.

AREA	WHAT MILI CAN WORK WITH
Chat & messaging	Team chat, direct messages, and group channels — read, send, and respond.
Email & calendar	Inboxes, invitations, scheduling, and reminders.
Files & storage	Documents, shared drives, and attachments.
Productivity & notes	Notes, tasks, wikis, and knowledge bases.
Business & operations	Ticketing, records, and line-of-business systems.

AREA	WHAT MILI CAN WORK WITH
Developer & DevOps	Repositories, pipelines, and issue trackers.
Web & research	Live web search, page retrieval, and monitoring.
Devices & automation	Schedulers, webhooks, and your own scripts.

330+ ready-to-use integrations and growing — plus a simple way to add your own.

PRIVATE BY DESIGN

Your data stays yours.

Mili installs on hardware you own — a server, a workstation, even a small device in the office — and that is where your data, files, and credentials live, encrypted at rest. To do the actual thinking, Mili sends prompts to a dedicated GPU endpoint in a certified ISO 27001 datacenter in Canada, encrypted in transit. The content of those prompts and the AI's answers is never logged, retained, or analyzed — only request metadata (the model used, token counts, and a timestamp) is recorded, for reliability, security, and billing. No multi-tenant cloud app, no usage tracking, no data resale, and your data is never used to train any AI model. Access is granted one tool at a time, so you always know exactly what the agent can reach.

RUNS ANYWHERE

Light on your side, ready in an afternoon.

- Because the heavy lifting runs on the GPU endpoint, Mili stays light on your side — it installs in minutes with a single guided setup, no specialist required.
- Runs on Windows, macOS, Linux, and modest hardware, from a laptop to a rack server.
- Supports one operator or a whole team, with per-seat access when you need it.
- Updates cleanly in place, so you stay current without downtime or migration headaches.

Ready to see it in action?

Bring Mili into your environment and connect your first integrations in an afternoon. Get in touch to arrange a walkthrough tailored to the systems your team already uses.
